# FORMULARY

**602.778.1800 Tel • 1.866.560.4042 Toll Free**

## Using this formulary\*

The **Care1st** Formulary was created to help you as a healthcare provider manage the overall cost of providing prescription drug benefits for your patients. This formulary offers a wide range of medications to choose from—over 800 medications from various manufacturers.

We realize that these formulary drugs may not always be the right choice for your patients. However, choosing a formulary drug, when you believe it is appropriate, can help your patients gain access to the medications they need to stay healthy at a cost that's more affordable.

Inside this formulary you will find the following information:

- An explanation of the selection process for the **Care1st** Formulary (see page ii).
- An explanation of how to use this formulary information (see page ii).

\* Items listed with PA on the right are drugs that require authorization,

\* Items listed with QL have a quantity limit placed on them,

\* Items listed with ST require step therapy.

\* Medco Health manages your patients' pharmacy benefit at the request of **Care1st**. The information contained herein is current at the time of printing and may be subject to change.

Effective October 1, 2007

## Selecting medications for the Care1st Formulary

**Care1st** has established an independent committee of practicing physicians and pharmacists to help ensure that our formulary is medically sound and supports your patients' health. This committee—called the Pharmacy & Therapeutics Committee—reviews and evaluates medications on the **Care1st** Formulary based on safety and efficacy to help ensure clinical integrity in all covered therapeutic categories.

## Using this formulary information

This formulary was designed so that formulary generic products are listed first in each section under the heading **Generics**. Formulary brand-name products are listed below the generic products under the heading **Brands**. If a generic is listed in the **Generics** section, then its corresponding brand-name version(s) is not covered.

## Using formulary alternatives

We realize that you may not always be able to prescribe formulary drugs for your patients. However, by referring to this book before prescribing, you can help ensure that your patients can take full advantage of the coverage provided by their prescription drug plan.

**Care1st** administers this formulary as a closed formulary. Prescription coverage will only be provided for formulary drugs. If there are special circumstances that necessitate a patient take a nonformulary drug, you may request a coverage review. If coverage is approved, your patient should fill his or her prescription at a participating retail pharmacy.
